Overview

IBM[®] Machine Setup Support Services for IBM Storage Systems is an optional, independent service over and above base hardware and software support services (Basic Maintenance) for eligible products. Machine Setup Support Services includes an IBM Support Services Representative (SSR) to perform the following:

- Physical racking and basic initialization of designated enclosures
- Connecting host cables and Serial Attached SCSI (SAS) expansion cabling as required, provided that host cabling is planned and provided by the client in advance of the installation with clear instructions

Machine Setup Support Services for Storage machines does not include installation of the rack, Power[®] Distribution Units (PDUs), or configuring of storage volumes or Spectrum Virtualize software features. The client is responsible for installation planning and site preparation as documented in the installation planning section of the applicable [IBM Documentation](#). IBM recommends clients contact local service delivery to assist with the site planning.

This service covers installation support only, and any hardware problems encountered will have to be resolved under a service request in accordance with the product's warranty terms.

Planned availability date

August 10, 2021
