IBM Security Value Assessments

As your IBM Security environment evolves, we can help ensure that you are realizing as much value as possible from your investment.

Receive a no-fee, customized report describing your current IBM Security product deployment and a clear, actionable plan on how to achieve your desired security and business goals.

IBM Security Value Assessment:

This two to three-hour engagement (carried out remotely or on-site), will review how the technology is currently deployed and provide specific details on how to optimize your IBM security product investment.

- Outlining your desired security monitoring end state, including any developments or changes in strategy or environment since initial implementation
- Providing specific actionable recommendations to move from current to desired state
- Updating your team on the evolving solution set (there can often be a few surprises here!)
- Showing you how IBM Security can continue being an enabler of business and innovation in the future
- Prioritizing recommendations that will be delivered within one week of engagement

IBM Security offers the following Value Assessments:

- QRadar Value Assessment
- Guardium Value Assessment
- Resilient Value Assessment
- Identity Value Assessment
- MaaS360 Value Assessment

*Each Value Assessment is offered as a separate engagement
